The brightness of being.

Lighting for Homes
and Interiors

MAYTONI

Interior & Outdoor 2026

Interior 2026

The brightness of being.

Light turns a room into a home, a moment into a memory. The Brightness of Being is our 2026 theme for Interior, an invitation to understand brightness as an attitude. Not just lux on surfaces, but warmth, calm, energy. We create light that structures the day, creates harmony and stages scenes that last.

Rather than listing categories, we speak about variety. Our range is layered and extensive, combining a clear formal language with tangible materiality. Restrained silhouettes, balanced proportions, surfaces with character. Elements that blend quietly and still set accents. This is how a coherent picture emerges across different rooms, styles and requirements.

Interior, for us, is a curated canon of possibilities. Families that mix with ease, tones that harmonise, sizes that balance space. From a delicate point of light to soft area glow, from focused moments to generous atmospheres. Each collection adds its own nuance while staying compatible, so that individual choices become a seamless whole. To plan is to select, vary, refine. That is why our offer emphasises orientation and freedom. Clearly structured lines, comprehensible families, extensions that open room to play. Whether gentle light for calm, defining accents for focus or a welcoming presence outdoors, the overall impression stays consistent, the effect feels natural.

The Brightness of Being means revealing what matters, faces, textures, rituals. It puts people at the centre and lets spaces breathe. We believe in good design that elevates without overpowering, that connects without imposing. Discover collections that think Interior and Outdoor as one connected experience, versatile, reliable, inspiring.

Find the right Interior products and series for your assortment. **Contact your Maytoni Sales Manager and start curating your portfolio.**

Interior
Lighting for Homes and Interiors

Our Interior range brings a layered selection of luminaires designed to shape atmosphere with clarity and ease. Calm silhouettes, balanced proportions and tactile finishes create a coherent language across rooms and styles. Core categories include Chandeliers, Pendant Lamps, Ceiling Lamps, Wall Lamps, Floor Lamps and Table Lamps, complemented by Backlights and selected Accessories for a seamless finish. From soft ambient light to defined accents, pieces can be combined to compose scenes that feel natural and refined. Each product is intentional, versatile and simple to integrate, so assortments stay clear and projects remain effortless. The result is light that elevates daily rituals, reveals materials and lets spaces breathe.

Outdoor
Lighting for Gardens, Terraces and Pathways

Outdoor lighting extends the Maytoni experience beyond the threshold. Durable materials, weather-ready construction and consistent light quality ensure a reliable presence in changing conditions. Subtle forms, controlled glare and precise optics define paths, frame greenery and welcome guests without overpowering the setting. Collections are conceived to complement Interior families, so transitions from inside to outside feel seamless. The focus is on atmosphere, orientation and long-lasting performance.

Architectural
Lighting for Projects and Architecture

Our Architectural portfolio provides system-driven solutions for professional environments. Logical, modular components, consistent colour rendering and effectiveglare control enable clear planning and confident execution. Track luminaires, downlights and controls work together as unobtrusive infrastructure, shaping zones, sightlines and vertical emphasis. Installation is straightforward, documentation is clear, maintenance is predictable. For detailed insights, explore our dedicated Architectural catalogue, "The Precision in Space", which presents the full range of tools and systems for shaping space with control and consistency.

STUDIO

A CURATED DESIGN COLLECTION BY MAYTONİ

Studio Collection
New voices in light

The Studio Collection expands our Interior range with a clear mission, to reach new audiences and develop progressive, original designs with emerging designers from Germany and across Europe. It is a platform for new perspectives, where material, proportion and atmosphere come together. We start with Table Luminaires. Portable or plugged, petite or sculptural, each piece shapes intimate zones, highlights textures and adds warmth to daily rituals. Calm silhouettes, precise details, a distinct character. Every lamp stands on its own, yet feels part of a coherent narrative.

Personality matters. In Studio, the designer's voice and standards are part of the process, informing decisions from concept to finish. We are excited to begin with our first designers, and we will continue to grow the collection across further categories, guided by clarity, versatility and a human-centred approach to light. Explore the first Studio Table Lamps and curate your selection. **Contact your Maytoni Sales Manager to find the right designs for your assortment.**

Memory

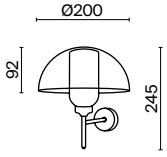

About series

MEMORY

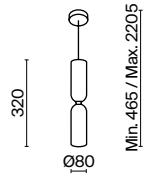

«When I begin sketching concepts for future luminaires, I do not always know where inspiration will lead me. One of my drawings resembled an hourglass. The memory of a bygone era, when time was measured by the flowing movement of sand, became the foundation of the Memory series.

Continuing the theme of continuity, I chose natural materials such as marble, ceramics, and glass. Glossy textures, fluid forms, and a classic palette make the luminaires of this series bring warmth and serenity into any interior. »

LED B

About series

MISTERIO

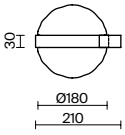

«The glass of this luminaire reminds me of ripples on the water. The multicolor finish creates the effect of a rainbow that comes to life in sunlight. With every shift of perspective, new shades reveal themselves, as if the luminaire has a life of its own.

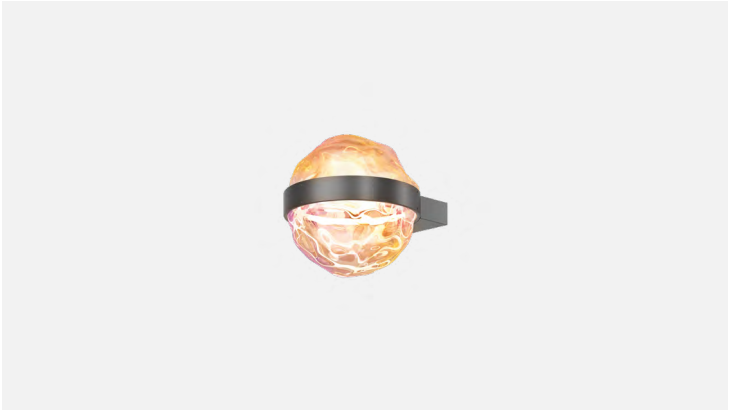

I wanted the collection to feel weightless. That is why the LED module is hidden inside in the form of a ring. The light flows gently through the glass without distracting from its beauty. The emphasis is on the glass, on its texture. It is a small work of art that I created with love.»

About series

OPUS

«The Opus series is like a journey through time, where every detail breathes history. At first sight, the luminaire seemed both ancient and strikingly modern. Its texture evoked raw stone, as if freshly unearthed, yet it appeared refined and elegant.

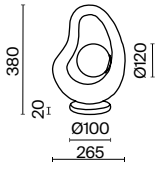

The smooth, slightly irregular lines seemed to say: “I was made by hand, with love.” It felt inviting, almost urging you to touch it and sense its warmth.»

KYOTO

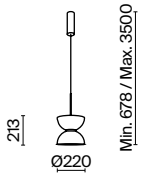

«When I was developing the Kyoto collection, I wanted to convey the refined harmony inherent in Japanese culture. The silhouettes of the luminaires are like a bridge between past and present, transporting us to Japan's ancient capital.

I paid particular attention to eliminating 'visual noise': the glass elements, like parts of a construction set, fit perfectly on top of one another. This creates a sense of purity that is so characteristic of Japanese aesthetics.»

About series

CAMBIO

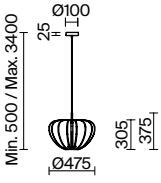

«When I created the Cambio series, I wanted to move beyond the conventional understanding of lighting. Cambio, which means ‘change’ in Italian, is more than just a collection of luminaires - it is a true transformer that redefines the role of light in an interior. Each model is a symbiosis of functionality and art, where light meets acoustic design.

For me, this series embodies the idea that light can be more than a functional element. It can inspire, surprise, and transform the perception of space.»

Nostalgia

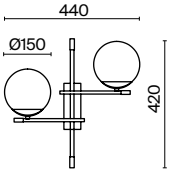

About series

NOSTALGIA

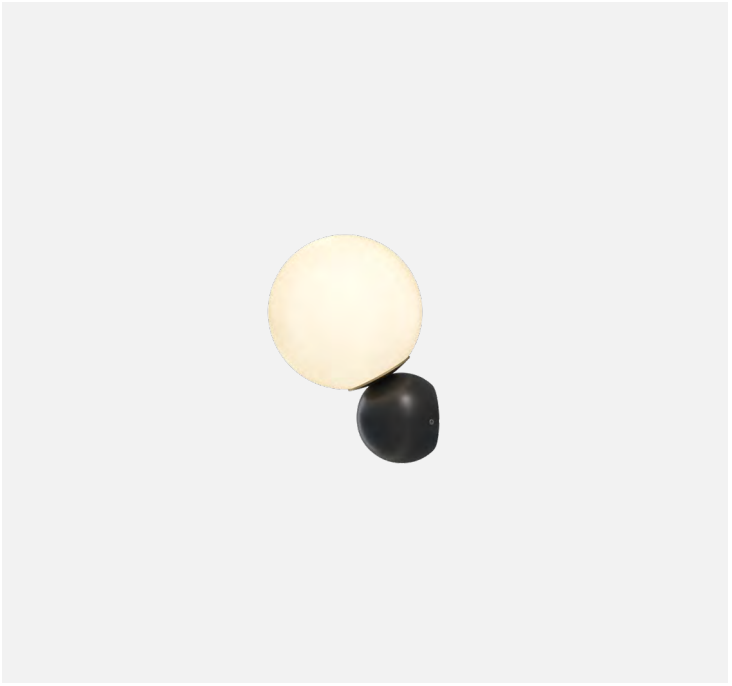

«When I created the Nostalgia series, I wanted to design something timeless. This collection can rightfully be called a new classic. The asymmetric design combines traditional silhouettes with a contemporary vision, while the black frame with white shades, accented with golden details, looks both stylish and elegant. The white matte glass shades diffuse the light softly, filling the space with warmth and comfort.

I paid particular attention to the geometry of the luminaires: the clear lines of the frame contrast with the soft spherical forms of the shades, creating a perfect balance.»

DE Doppelter Lampenschirm aus Glas: Innenseite matt, Außenseite transparent. Stil: Italienische Neoklassik. Kultige Formen der 60er Jahre im Design. IT Doppia plafoniera in vetro: interna - opaca, esterna - trasparente. Stile - neoclassico italiano. Forme iconiche degli anni '60 nel design. FR Globe double en verre : intérieur mat, extérieur transparent. Style : italien néoclassique. Formes culte du design des années 60.

G

VISION

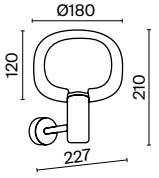

«I am inspired by the idea of uniting the craftsmanship of glass-blowers with the aesthetics of mid-20th-century Italian design. The name of the series – Vision – is a tribute to those whose keen eye and years of experience allow them to create true masterpieces.

Each shade, made of double-blown glass, is the result of painstaking work. The spirit of Italian design is expressed in the simplicity of the glass forms and the strict lines of the metal frame.»

GOLDEN CAGE

«When designing Golden Cage, my goal was to embody the idea of modern luxury, where every detail is carefully considered. The name ‘Golden Cage’ came naturally the moment I sketched the framework of future beads made from wire.

A simple yet original construction, where golden beads are strung along a flexible LED cord like jewels on a thread, creates a sense of lightness and airiness. These luminaires truly resemble jewelry, designed to adorn an interior. They are meant to highlight the individuality of a space.»

About series

LEVITATION

«In creating the Levitation series, I wanted to challenge convention - to make the luminaire appear as though it were floating in the air, defying gravity. The result is a design where a wire frame seems to embrace the glass diffuser, creating an effect of weightlessness.

What I like most is that the series includes both compact models for intimate compositions and large-scale luminaires with bidirectional lighting. Levitation easily adapts to different styles, adding a subtle touch of futurism to any space.»

TROPIC

About series

«When I worked on the Tropic series, I wanted to bring the atmosphere of a tropical paradise into interiors. I was inspired by the lush leaves of exotic plants, their whimsical shapes, and vibrant shades. Each luminaire in the series is like a fragment of a tropical forest, where folded metal circles resemble the curves of leaves, and the embossing gives them texture and vitality.

I chose matte glass spheres to create soft, diffused light, as though filtering through dense foliage. Tropic luminaires create vivid accents, evoking warmth, sunlight, and distant tropical islands.»

Alexey Danilin
Lead Designer at Maytoni

LED | G | CH

About series

COLLAR

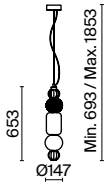

«The main idea behind the Collar series lies in decorative glass elements - cast transparent with vertical relief, blown matte, and tinted with a geometric pattern. These are strung along a cable, creating both lightness and versatility. Inside the acrylic diffuser, an LED strip provides soft, even illumination that enhances the space without overwhelming it.

The Collar series does not seek to dominate the interior, but once present, it becomes an integral part of it, subtly highlighting atmosphere and style.»

FACET

«When I was developing the Facet series, I wanted to create something bold and memorable. The massive crystal facets became the defining element - they play with light, adding both dynamism and a sense of luxury to the interior.

I like how the large crystal cuts emphasize the architectural quality of the luminaires, making them the focal point in any space, whether modern or classical. For me, Facet is not just about lighting; it is a way to introduce a striking accent into an interior, one that brings joy every day.»

Color temperature

2700K	Warm light like incandescent lamp or sunrise/sunset
3000K	Warm white light
4000K	Neutral white light, reminiscent of the color of daytime sun
6000K	Extremely white light

IP PROTECTION RATING

The first digit is the level of protection against the ingress of solid particles.
0 – no protection
1 – protection against the impact of external objects with a diameter of more than 50 mm
2 – protection against the impact of external objects with a diameter of more than 12 mm
3 – protection against the impact of external objects with a diameter of more than 2.5 mm
4 – protection against the impact of external objects with a diameter of 1 mm or more
5 – full protection against contact, dust can get into the device partially (does not affect the functionality)
6 – full protection against contact, dust cannot get into the device

The second digit is moisture protection
0 – no protection
1 – protection against condensate
2 – protection against water drops
3 – protection against raindrops
4 – protection against water splashes
5 – protection against water jets
6 – protection against water
7 – protection against water penetration when immersed to a depth of 1 meter
8 – protection against water penetration during prolonged immersion
